Special Issue on Environmental Quality and Geoscience

Call for Papers

The environment directly affects health status and plays a major role in quality of life, years of healthy life lived, and health disparities. Poor air quality is linked to premature death, cancer, and long-term damage to respiratory and cardiovascular systems. Secondhand smoke containing toxic and cancer-causing chemicals contributes to heart disease and lung cancer in nonsmoking adults. Globally, nearly 25% of all deaths and the total disease burden can be attributed to environmental factors. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of environmental quality and geoscience.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring environmental quality and geoscience. In this special issue, potential topics include, but are not limited to:

- Health impact of environmental quality
- Environmental quality assessment
- Environmental quality management
- Effects of deteriorating air quality
- Environmental quality standards
- Environmental quality monitoring

Authors should read over the journal’s For Authors carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal’s Paper Submission System.

Please kindly notice that the “Special Issue” under your manuscript title is supposed to be specified and the research field “Special Issue - Environmental Quality and Geoscience” should be chosen during your submission.

According to the following timetable:

<table>
<thead>
<tr>
<th>Submission Deadline</th>
<th>February 20th, 2019</th>
</tr>
</thead>
<tbody>
<tr>
<td>Publication Date</td>
<td>April 2019</td>
</tr>
</tbody>
</table>
