Special Issue on Blood Pressure and Health

In the journal Health (ISSN Online: 1949-5005)

Detailed information about this journal: Indexing, Editorial Board, Author’s Guidelines

Blood pressure is the pressure of circulating blood on the walls of blood vessels. Blood pressure is influenced by cardiac output, total peripheral resistance and arterial stiffness and varies depending on situation, emotional state, activity, and relative health/disease states. In the short term it is regulated by baroreceptors which act via the brain to influence nervous and endocrine systems. Blood pressure that is low due to a disease state is called hypotension, and pressure that is consistently high is hypertension. Both have many causes and may be of sudden onset or of long duration. Long term hypertension is a risk factor for many diseases, including heart disease, stroke and kidney failure. Long term hypertension is more common than long term hypotension. Long term hypertension often goes undetected because of infrequent monitoring and the absence of symptoms.

We sincerely welcome scholar and expert with relative academic backgrounds to submit original research paper or review paper to this special issue on Blood Pressure and Health. Potential topics or areas include, but are not limited to:

- Arterial blood pressure monitoring
- Blood pressure measurement in pregnancy
- Blood pressure control and cardiovascular risk reduction
- Blood pressure control in disease
- Blood pressure and brain
- Arterial pressure and pulse pressure
- Hemodynamic research
- Emotion and sleep effects on blood pressure
- Hypertension and stroke
- Blood pressure and obesity issues
