Special Issue on Molecular Diagnosis

Call for Papers

Molecular diagnosis is a diagnostic technique that uses molecular biology technology to detect changes in the structure or expression level of genetic material in patients. It provides information and decision-making basis for disease prevention, prediction, diagnosis, treatment and prognosis. Molecular diagnosis technology has deepened and expanded the connotation and denotation of laboratory medicine. In recent years, molecular diagnosis has attracted more and more attention, especially in the fields of pathogen resistance, noninvasive prenatal diagnosis, pharmacogenomic techniques and tumor individualized treatment.

In this special issue, we intend to invite front-line researchers and authors to submit original researches and review articles on exploring molecular diagnosis. Potential topics include, but are not limited to:

- Molecular medicine
- Molecular pathology
- Pharmacogenomic techniques
- Tumor individualized treatment
- Pathogen detection and drug resistance analysis
- Molecular disease
- Genetic diagnosis
- Biochip technology
- Emerging molecular diagnostic tools and technologies
- Detection, monitoring, and treatment of molecular causes of disease
- Application of biomarkers in drug development

Authors should read over the journal’s For Authors carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal’s Paper Submission System.

Please kindly notice that the “Special Issue” under your manuscript title is supposed to be specified and the research field “Special Issue – Molecular Diagnosis” should be chosen during your submission.

According to the following timetable:

<table>
<thead>
<tr>
<th>Submission Deadline</th>
<th>February 21st, 2019</th>
</tr>
</thead>
<tbody>
<tr>
<td>Publication Date</td>
<td>April 2019</td>
</tr>
