Special Issue on Histopathology Research

Call for Papers

Tissues of living organisms are constantly influenced by various factors of internal and external environment, and respond to stimuli through their own response and regulation mechanism, which can ensure the normal function of tissues. But when the nature, intensity and duration of stimulation exceed a certain limit, the tissue will be damaged, or even diseased. Histopathology is a biomedical science that uses natural science to study the changes of etiology, pathogenesis, morphology, structure, function and metabolism of diseases, reveal the law of occurrence and development of diseases, and clarify the nature of diseases.

In this special issue, we intend to invite front-line researchers and authors to submit original researches and review articles on exploring histopathology research. Potential topics include, but are not limited to:

- Histopathological technology
- Histopathological diagnosis
- Histopathological analysis
- Histopathological change
- Histochemical observation
- Clinical histopathology
- Tissue biopsy
- Pathological imaging
- Development and application of histopathology

Authors should read over the journal’s For Authors carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal’s Paper Submission System.

Please kindly notice that the “Special Issue” under your manuscript title is supposed to be specified and the research field “Special Issue – Histopathology Research” should be chosen during your submission.

According to the following timetable:

<table>
<thead>
<tr>
<th>Submission Deadline</th>
<th>July 22nd, 2019</th>
</tr>
</thead>
<tbody>
<tr>
<td>Publication Date</td>
<td>September 2019</td>
</tr>
</tbody>
</table>
