Special Issue on Cancer Detection and Prevention

Call for Papers

Cancer screening aims to detect cancer before symptoms appear. This may involve blood tests, urine tests, DNA tests other tests, or medical imaging. The benefits of screening in terms of cancer prevention, early detection and subsequent treatment must be weighed against any harms.

Cancer prevention is the practice of taking active measures to decrease the incidence of cancer and mortality.] The practice of prevention is dependent upon both individual efforts to improve lifestyle and seek preventative screening, and socioeconomic or public policy related to cancer prevention. Globalized cancer prevention is regarded as a critical objective due to its applicability to large populations, reducing long term effects of cancer by promoting proactive health practices and behaviors, and its perceived cost-effectiveness and viability for all socioeconomic classes.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on Cancer Detection and Prevention. Potential topics include, but are not limited to:

- Cancer screening, prevention and control
- Early detection and treatment
- Early detection of malignant change and metastatic spread
- Biomarker for the detection
- Detection methods, tests and medical imaging
- Genetic testing
- Avoiding risk factors
- Vaccination strategies
- Physical activity and cancer risk
- Risk assessment

Authors should read over the journal’s For Authors carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal’s Paper Submission System.

Please kindly notice that the “Special Issue” under your manuscript title is supposed to be specified and the research field “Special Issue – Cancer Detection and Prevention” should be chosen during your submission.

According to the following timetable:
