Special Issue on PM$_{2.5}$ Pollution Research

Call for Papers

Atmospheric particulate matter are tiny pieces of solid or liquid matter associated with the Earth's atmosphere. The PM$_{2.5}$ atmospheric pollution is becoming more and more serious. A lot of importance has been attached to its course of formation and control scheme. Especially the related research has been taken on the quantitative analysis and control. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of pm$_{2.5}$ pollution research.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore pm$_{2.5}$ pollution research. In this special issue, potential topics include, but are not limited to:

- Sources of atmospheric particulate matter
- Monitoring of PM$_{2.5}$
- Harm of PM$_{2.5}$
- Control technologies
- Size distribution of particulates
- Control of pollution source

Authors should read over the journal’s Authors’ Guidelines carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal’s Paper Submission System.

Please kindly notice that the “Special Issue” under your manuscript title is supposed to be specified and the research field “Special Issue - PM$_{2.5}$ Pollution Research” should be chosen during your submission.

According to the following timetable:

<table>
<thead>
<tr>
<th>Submission Deadline</th>
<th>February 26th, 2015</th>
</tr>
</thead>
<tbody>
<tr>
<td>Publication Date</td>
<td>April 2015</td>
</tr>
</tbody>
</table>
