Wastewater, also written as waste water, is any water that has been adversely affected in quality by anthropogenic influence. Municipal wastewater is usually treated in a combined sewer, sanitary sewer, effluent sewer or septic tank.

Sewage is the subset of wastewater that is contaminated with feces or urine, but is often used to mean any wastewater. Sewage includes domestic, municipal, or industrial liquid waste products disposed of, usually via a pipe or sewer, sometimes in a cesspool emptier.

Sewerage is the physical infrastructure, including pipes, pumps, screens, channels etc. used to convey sewage from its origin to the point of eventual treatment or disposal. It is found in all types of sewage treatment, with the exception of septic systems, which treat sewage on-site.

Authors should read over the journal’s Authors’ Guidelines carefully before submission, Prospective authors should submit an electronic copy of their complete manuscript through the journal Paper Submission System.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring Wastewater Treatment and Prevention Engineering.

Please kindly notice that the “Special Issue” under your manuscript title is supposed to be specified and the research field “Special Issue — Wastewater Treatment and Prevention Engineering” should be chosen during your submission.

According to the following timetable:

<table>
<thead>
<tr>
<th>Manuscript Due</th>
<th>May 31st, 2013</th>
</tr>
</thead>
<tbody>
<tr>
<td>Publication Date</td>
<td>July 2013</td>
</tr>
</tbody>
</table>
