Special Issue on Mineral Resources

Call for Papers

Minerals are naturally-occurring, homogeneous geological formations. Unlike fossil fuels, such as coal, oil and natural gas, minerals are inorganic compounds, meaning they are not formed of animal or plant matter. Canada is abundant in many mineral resources - mined in every province and territory - and a world leader in the production of potash, aluminum, nickel, salt, sulphur and uranium, among others. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in this area of mineral resources.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore mineral resources. In this special issue, potential topics include, but are not limited to:

- History of mineral resource development
- Regional distribution of mineral resources
- Minerals and economic development
- Metallic and non-metallic minerals
- Use and exploitation

Authors should read over the journal’s For Authors carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal’s Paper Submission System.

Please kindly specify the “Special Issue” under your manuscript title. The research field “Special Issue - Mineral Resources” should be selected during your submission.

Special Issue timetable:

<table>
<thead>
<tr>
<th>Submission Deadline</th>
<th>January 31st, 2019</th>
</tr>
</thead>
<tbody>
<tr>
<td>Publication Date</td>
<td>March 2019</td>
