Special Issue on Game Theory

Call for Papers

Game Theory is a study of strategic decision making. More formally, it is "the study of mathematical models of conflict and cooperation between intelligent rational decision-makers". An alternative term suggested "as a more descriptive name for the discipline" is interactive decision theory. Game theory is mainly used in economics, political science, and psychology, as well as logic and biology. The subject first addressed zero-sum games, such that one person's gains exactly equal net losses of the other participant(s). Today, however, game theory applies to a wide range of behavioral relations, and has developed into an umbrella term for the logical side of decision science, to include both human and non-humans, like computers. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share and discuss various new issues and developments in this area of game theory.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring game theory. Potential topics include, but are not limited to:

- Representation of games
- General and applied uses
- Prescriptive or normative analysis
- Cooperative or non-cooperative games
- Symmetric and asymmetric games
- Simultaneous and sequential
- Combinatorial games

Authors should read over the journal’s Authors’ Guidelines carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal’s Paper Submission System.

Please kindly notice that the “Special Issue” under your manuscript title is supposed to be specified and the research field “Special Issue - Game Theory” should be chosen during your submission.

According to the following timetable:

<table>
<thead>
<tr>
<th>Submission Deadline</th>
<th>June 26th, 2014</th>
</tr>
</thead>
<tbody>
<tr>
<td>Publication Date</td>
<td>August 2014</td>
</tr>
</tbody>
</table>
