Special Issue on Built Environment

Call for Papers

The built environment is a variety of buildings and places to be constructed and transformed artificially, especially those that can be changed by policy and human behavior. For example, site selection and design of residence, business, office, school and other buildings, as well as location and design of pedestrian road, bicycle lane, greenway and motor vehicle road. It is a combination of a series of elements related to land use, traffic systems, and urban design. There are many factors to measure the built environment, and Severo and Kokman attribute the built environment to three important dimensions, that is, density, diversity and design. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of built environment.

In this special issue, we intend to invite front-line researchers and authors to submit original researches and review articles on exploring built environment. Potential topics include, but are not limited to:

- Built environment and sustainable development
- Relationship between built environment and human behaviors
- Urban built environment
- Built environment management
- Built environment evaluation
- Built environment and environmental psychology
- The significance of built environment

Authors should read over the journal’s For Authors carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal’s Paper Submission System.

Please kindly notice that the “Special Issue” under your manuscript title is supposed to be specified and the research field “Special Issue – Built Environment” should be chosen during your submission.

According to the following timetable:

<table>
<thead>
<tr>
<th>Submission Deadline</th>
<th>June 27th, 2019</th>
</tr>
</thead>
<tbody>
<tr>
<td>Publication Date</td>
<td>August 2019</td>
</tr>
</tbody>
</table>
