Special Issue on Experimental Economics

Call for Papers

Experimental economics is the application of experimental methods to study economic questions. Data collected in experiments are used to estimate effect size, test the validity of economic theories, and illuminate market mechanisms. Economic experiments usually use cash to motivate subjects, in order to mimic real-world incentives. Experiments are used to help understand how and why markets and other exchange systems function as they do. Experimental economics have also expanded to understand institutions and the law.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on experimental economics. Potential topics include, but are not limited to:

- Behavioral economics
- Economic game theory
- Decision making and bargaining
- Empirical research in economics
- Market games
- Simulation-based analyses
- Laboratory methods
- Theoretical work and experimental data

Authors should read over the journal’s For Authors carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal’s Paper Submission System.

Please kindly notice that the “Special Issue” under your manuscript title is supposed to be specified and the research field “Special Issue – Experimental Economics” should be chosen during your submission.

According to the following timetable:

<table>
<thead>
<tr>
<th>Submission Deadline</th>
<th>March 28th, 2018</th>
</tr>
</thead>
<tbody>
<tr>
<td>Publication Date</td>
<td>May 2018</td>
</tr>
</tbody>
</table>
