Special Issue on Architectural Mechanics

Call for Papers

In contemporary design, mainly as a result of significant development of science and technology, as well as the ever-increasing size of modern buildings, the role of a structure began visibly determine an architecture of the building. There was also a division of roles in the design process of the building, which usually involve both architects and engineers-constructors. Modern design requires mastering the basics of technical disciplines necessary to understand the role and work of the structure, and thus: theoretical mechanics, structural mechanics and strength of materials, including so-called theory of structures. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in this area of architectural mechanics.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore architectural mechanics. In this special issue, potential topics include, but are not limited to:

- Static analysis
- Constraint of structure
- Internal force of the bar
- The bearing capacity of the bar
- Analysis of the geometrical composition of structures
- Structural engineering

Authors should read over the journal’s For Authors carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal’s Paper Submission System.

Please kindly specify the “Special Issue” under your manuscript title. The research field “Special Issue – Architectural Mechanics” should be selected during your submission.

Special Issue timetable:

<table>
<thead>
<tr>
<th>Submission Deadline</th>
<th>December 27th, 2018</th>
</tr>
</thead>
<tbody>
<tr>
<td>Publication Date</td>
<td>February 2019</td>
</tr>
</tbody>
</table>
