

## Special Issue on Geosciences of the Built Environment

### Call for Papers

Architecture, engineering and construction affect us as individuals, as communities, as nations and as a world. Whatever the scale, the built environment needs to be economically, environmentally and socially sustainable. We seek to enable this by developing knowledge, tools and materials that enhance "triple bottom line" sustainability at all stages of a project's life. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of **geosciences of the built environment**.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **geosciences of the built environment**. In this special issue, potential topics include, but are not limited to:

- Building environmental quality
- Building materials
- Environmental impact
- Characterization of weathering products
- Building environmental assessment
- Building environmental sustainability

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the "**Special Issue**" under your manuscript title is supposed to be specified and the research field "**Special Issue - Geosciences of the Built Environment**" should be chosen during your submission.

According to the following timetable:

Submission Deadline	August 30th, 2018
Publication Date	October 2018
