

Special Issue on Algae Biology

Call for Papers

Algae are photosynthetic organisms with photosynthetic pigments such as chlorophyll. As a group, algae produce most of the oxygen on the earth. They are huge in number and exist in almost every corner of the ocean, receiving sunlight. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of **Algae Biology**.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Algae Biology**. Potential topics include, but are not limited to:

- Reproduction and life cycles of algae
- Phylogeny and problems of evolution of algae
- Algal cultivation
- Algal products and their economic assessment
- Applied algology
- Algae photosynthesis
- Algal biotechnology and genetic engineering
- Energy microalgae
- Metabolic engineering and synthetic biology of microalgae systems
- Cyanobacterial toxins

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Algae Biology**” should be selected during your submission.

Special Issue Timetable:

Submission Deadline	October 1st, 2021
Publication Date	December 2021
