

Special Issue on Research on Polysaccharide

Call for Papers

Polysaccharide is a kind of complex and huge carbohydrate material, which is made of many monosaccharide molecules condensed and dehydrated. Polysaccharides are widely distributed and important in nature. Some are the components of cell wall of animals and plants, such as peptidoglycan and cellulose; some are the nutrients stored in animals and plants, such as glycogen and starch; some have special biological activities, such as heparin in human body, which has anticoagulant effect. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of **Research on Polysaccharide**.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Research on Polysaccharide**. Potential topics include, but are not limited to:

- Protein-polysaccharide interactions
- Cell wall polysaccharides
- Structural polysaccharides
- Polysaccharide extraction techniques
- Plant polysaccharide
- Fungal polysaccharide
- Clinical relevance of polysaccharide
- Polysaccharide hydrolysis
- Bacterial capsular polysaccharides

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Research on Polysaccharide**” should be selected during your submission.

Special Issue Timetable:

Submission Deadline	June 7th, 2020
Publication Date	August 2020

Guest Editor:

Scientific Research
Open Access

**Advances in Biological
Chemistry**

ISSN Online: 2162-2191
