Special Issue on Chemical Reaction Engineering

Call for Papers

A chemical reaction involves a chemical change, which happens when two or more particles (which can be molecules, atoms or ions) interact. For example, when iron and oxygen react, they change to a new substance, iron oxide (rust). Iron oxide has different chemical properties to iron and oxygen. This is different to a physical change. For example, water can turn to ice, but ice is still water in another physical state – ice and water have the same chemical properties. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of **Chemical Reaction Engineering**.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **Chemical Reaction Engineering**. In this special issue, potential topics include, but are not limited to:

- Chemical kinetics
- Reaction engineering
- Reactor analysis
- Optimizing reactions and reactor design
- Reactive distillation
- Membrane reactors
- Microreactors
- Applications of reaction engineering

Authors should read over the journal's For Authors carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's Paper Submission System.

Please kindly specify the "**Special Issue**" under your manuscript title. The research field "**Special Issue - *Chemical Reaction Engineering***" should be selected during your submission.

Special Issue timetable:

Submission Deadline	January 19th 2024
Publication Date	March 2024
