

Special Issue on Research on Climatology

Call for Papers

Climatology is the study of the atmosphere and weather patterns over time. This field of science focuses on recording and analyzing weather patterns throughout the world and understanding the atmospheric conditions that cause them. It is sometimes confused with meteorology, which is the study of weather and weather forecasting. However, climatology is mainly focused on the natural and artificial forces that influence long-term weather patterns. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in this area of **research on climatology**.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **research on climatology**. In this special issue, potential topics include, but are not limited to:

- Regional climatology
- Climate monitoring
- Physical climatology
- Climate dynamics
- Agricultural and forest climatology
- Climate risk and vulnerability
- Climate distribution
- Extreme climate and weather change
- Weather forecasting

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue - Research on Climatology**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	July 30th, 2021
Publication Date	September 2021

Guest Editor:

Prof. **Shaocai Yu**, North Carolina State University, USA
