

## Special Issue on Air Quality, Atmosphere & Health

### Call for Papers

The health effects of air pollution are serious – one third of deaths from stroke, lung cancer and heart disease are due to air pollution. Air pollution is hard to escape, no matter how rich an area you live in. It is all around us. Microscopic pollutants in the air can slip past our body's defences, penetrating deep into our respiratory and circulatory system, damaging our lungs, heart and brain. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in this area of **Air Quality, Atmosphere & Health**.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Air Quality, Atmosphere & Health**. In this special issue, potential topics include, but are not limited to:

- Air quality monitoring and management
- Exposure and risk assessment
- Indoor air quality
- Atmospheric modeling and prediction
- Air pollution climatology
- Air pollution measurement
- Health and ecological effects
- Regional and global change and satellite measurements

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue - Air Quality, Atmosphere & Health**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	August 29th, 2024
Publication Date	October 2024
