

## Special Issue on Analytical Techniques in Biochemistry

### Call for Papers

In general, the bioavailability of an element is determined by its chemical form. Oxidation state and solubility are particularly important factors for bioavailability. For this reason, it is frequently necessary to establish the trace element composition of agricultural, biological, clinical, and environmental materials in both qualitative and quantitative terms. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in this area of **Analytical Techniques in Biochemistry**.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Analytical Techniques in Biochemistry**. In this special issue, potential topics include, but are not limited to:

- Electrochemical methods
- PCR technology
- Nucleic acid sequence analysis
- Selection and screening and enzyme kinetics
- Protein analysis
- Enzyme-linked immunosorbent assay
- Clinical biochemistry: techniques and instrumentation

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Analytical Techniques in Biochemistry**” should be selected during your submission.

Special Issue timetable:

Submission Deadline	March 23rd, 2024
Publication Date	May 2024

**Guest Editor:**
