Special Issue on Plants and Microorganisms Interactions

Call for Papers

In both natural and agricultural environments plants live in association with a multitude of microorganisms belonging to different microbial types, mainly bacteria and fungi. Some of these microbes regulate positively plant growth and productivity, while others can damage the host with important ecological and economic consequences. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in this area of Plants and Microorganisms Interactions.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore Plants and Microorganisms Interactions. In this special issue, potential topics include, but are not limited to:

- Microbial interactions within the plant holobiont
- Interactions of plants with bacteria and fungi
- Plant-microbe interactions in the phyllosphere
- Plant growth–promoting microbes
- Microbial community diversity and plant performances
- Plants shape the microbial community
- Plant community ecology and soil symbiont interactions

Authors should read over the journal’s For Authors carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal’s Paper Submission System.

Please kindly specify the “Special Issue” under your manuscript title. The research field “Special Issue – Plants and Microorganisms Interactions” should be selected during your submission.

Special Issue timetable:

<table>
<thead>
<tr>
<th>Submission Deadline</th>
<th>May 15th, 2022</th>
</tr>
</thead>
<tbody>
<tr>
<td>Publication Date</td>
<td>July 2022</td>
</tr>
</tbody>
</table>
