

Special Issue on Plant-Environment Interactions

Call for Papers

Plant-Environment Interactions is a field of Plant Sciences that investigates the complex relationships between plants and their surrounding environments. This discipline delves into how plants respond and adapt to various environmental conditions, including changes in climate, soil properties, light availability, and the presence of other organisms. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in this area of **Plant-Environment Interactions**.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **Plant-Environment Interactions**. In this special issue, potential topics include, but are not limited to:

- Phenotypic Plasticity
- Ecophysiology
- Stress Physiology
- Plant-Soil Interactions
- Plant-Microbe Interactions:
- Biogeography and Ecogeography
- Plant Adaptation and Evolution
- Global Change Biology

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue – Plant-Environment Interactions**” should be selected during your Submission.

Special Issue timetable:

Submission Deadline	August 14th, 2024
Publication Date	October 2024
