Special Issue on Advances in Topology

Call for Papers

Topology is a major area of mathematics, which studies the constant properties that are preserved through deformations, twistings, and stretchings of objects. It has developed many subfields such as general topology, algebraic topology, differential topology and geometric topology. Topology is has widely used in physics, biology, computer science, robotics and so on.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **advances in topology**. Potential topics include, but are not limited to:

- General topology
- Algebraic topology
- Differential topology
- Geometric topology
- Economics topology
- Molecular topology
- Applications

Authors should read over the journal's For Authors carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's Paper Submission System.

Please kindly specify the "**Special Issue**" under your manuscript title. The research field "**Special Issue - *Advances in Topology***" should be selected during your submission.

Special Issue timetable:

Submission Deadline	July 28th, 2016
Publication Date	September 2016
