Operations research usually uses existing scientific and technological knowledge to solve specific problems and provides a basis for decision-makers to choose the best decision. In recent years, operations research has been continuously innovated and developed. However, there are still some interesting and challenging problems in technology and methods that are worthy of further exploration.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring Operations Research Theory and Applications. Potential topics include, but are not limited to:

- Operations research and regression
- Operations research and clustering
- Operations research and classification
- Operations research and outlier detection
- Robust optimization in application
- Stochastic optimization in application
- Humanitarian logistics
- Preference learning
- Machine learning
- Optimization algorithm and its application
- Game theory and its application
- Supply chain optimization management
- Emergency management
- Data envelopment analysis
- Group decision making analysis
- Multi-criteria decision analysis and application
- Fuzzy programming
- Strategic management

Authors should read over the journal’s For Authors carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal’s Paper Submission System.

Please kindly specify the “Special Issue” under your manuscript title. The research field “Special Issue - Operations Research Theory and Applications” should be selected during your submission.
Special Issue Timetable:

<table>
<thead>
<tr>
<th>Submission Deadline</th>
<th>November 22nd, 2022</th>
</tr>
</thead>
<tbody>
<tr>
<td>Publication Date</td>
<td>January 2023</td>
</tr>
</tbody>
</table>
