

Special Issue on Agriculture and Ecology

Call for Papers

Agricultural ecosystems provide humans with food, forage, bioenergy and pharmaceuticals and are essential to human wellbeing. Agroecosystems are both providers and consumers of ecosystem services. Humans value these systems chiefly for their provisioning services, and these highly managed ecosystems are designed to provide food, forage, fibre, bioenergy and pharmaceuticals. In turn, agroecosystems depend strongly on a suite of ecosystem services provided by natural, unmanaged ecosystems. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in this area of **Agriculture and Ecology**.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **Agriculture and Ecology**. In this special issue, potential topics include, but are not limited to:

- The benefits of ecological farming
- Ecological crop and soil management
- Grow healthy plants with good defense capabilities
- Enhance beneficial organisms
- Agroecological restoration
- Agroecosystem analysis
- Agricultural waste disposal
- Crop management and environmental quality
- Agricultural ecophysiology, community ecology, and ecosystems ecology
- Ecological perspective on agricultural production and resource utilization

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Agriculture and Ecology**” should be selected during your submission.

Special Issue timetable:

Submission Deadline	January 30th, 2021
Publication Date	March 2021
