

Special Issue on Fungi and Ecology

Call for Papers

Fungi and Ecology is an academic discipline that focuses on the study of fungi and their ecological roles in various ecosystems. It explores the interactions between fungi and other organisms, including plants, animals, and microorganisms. This field investigates the impact of fungal communities on nutrient cycling, decomposition, symbiotic relationships, and the ecological functions they perform. It also examines the ecological adaptations, distribution, and diversity of fungi, as well as their responses to environmental changes. The research in this area contributes to a deeper understanding of ecosystem dynamics and the importance of fungi in maintaining ecological balance.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on **Fungi and Ecology**. Potential topics include, but are not limited to:

- Fungal community ecology
- Fungal infections
- Fungi, plants and soil
- Fungal biodegradation
- Fungal biogeography
- Fungi reproduction
- Fungal interactions with other organisms
- Fungal response to environmental change
- Fungal conservation and biodiversity
- Fungi in food production

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue – Fungi and Ecology**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	February 22nd, 2024
Publication Date	April 2024

Scientific Research
Open Access

Advances in Microbiology

ISSN Online: 2165-3410
