

Special Issue on Case Reports in Infectious Diseases

Call for Papers

"**Case Reports in Infectious Diseases**" is an academic topic that focuses on the documentation and analysis of individual cases of infectious diseases. This field involves the detailed description of a specific patient's medical history, symptoms, diagnostic findings, treatment, and outcomes related to an infectious disease. Case reports serve as valuable contributions to medical literature by providing insights into rare or unusual manifestations of infectious diseases, atypical presentations, diagnostic challenges, and novel treatment approaches. They often highlight unique aspects of a particular case, such as demographic factors, underlying medical conditions, or specific risk factors that may contribute to the development or progression of the infection. These reports also play an important role in advancing medical knowledge by identifying emerging infectious diseases, new strains of pathogens, or drug-resistant infections. They can serve as an early warning system for public health officials to detect and respond to potential outbreaks. Additionally, case reports contribute to medical education by serving as educational resources for students, residents, and physicians to learn about rare or complex infectious diseases. They promote critical thinking and foster discussions on diagnostic dilemmas, treatment challenges, and clinical decision-making. The findings and observations from case reports can also generate hypotheses for further research, guiding the development of larger-scale studies, clinical trials, or epidemiological investigations. Overall, case reports in infectious diseases offer a platform for sharing clinical experiences, expanding medical knowledge, and enhancing patient care by presenting unique, informative, and thought-provoking cases that contribute to the broader understanding of infectious diseases and their management.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on **Case Reports in Infectious Diseases**. Potential topics include, but are not limited to:

- Diagnosis and management
- Preventive measures
- Bacterial infections
- Viral infections
- Fungal infections
- Parasitic infections
- Zoonotic infections
- Travel-related infections
- Pediatric infectious diseases

-
- Antibiotic resistance
 - Immunocompromised hosts
 - Nosocomial infections
 - Emerging infectious diseases
 - Infectious complications
 - New associations or variations in disease processes

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue – Case Reports in Infectious Diseases**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	November 9th, 2023
Publication Date	January 2024

For publishing inquiries, please feel free to contact the Editorial Assistant at submission.entrance1@scirp.org
