

Special Issue on Circuits and Systems for Communication and Information Technologies

Call for Papers

Rapid developments in the analog and digital processing of signals for communication, control, and computer systems have made the theory of electrical circuits and signal processing a burgeoning area of research and design. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of circuits and systems for communication and information technologies.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **circuits and systems for communication and information technologies**. In this special issue, potential topics include, but are not limited to:

- Optical fiber communication
- Wireless communication technology and system
- Information transmission and access
- Communication networks and switching technology
- Simulation and integration of communication and information systems
- Multimedia

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue - Circuits and Systems for Communication and Information Technologies**” should be chosen during your submission.

According to the following timetable:

| | |
|---------------------|----------------|
| Submission Deadline | May 13th, 2016 |
| Publication Date | June 2016 |
