

Special Issue on Electrical Energy and Control Systems

Call for Papers

An electrical control system is a physical interconnection of devices that influences the behaviour of other devices or systems. A simple electronic system is made up of an input, a process, and an output. Both input and output variables to the system are signals. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of **Electrical Energy and Control Systems**.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Electrical Energy and Control Systems**. In this special issue, potential topics include, but are not limited to:

- Fundamental principles of electrical control systems
- Standardized electrical control systems
- Specific problems with isolated, rural electrification schemes
- Advanced control methods and decision making tools for infrastructures
- Energy system modelling, economics and policy
- Operation, control and planning of power grids and smart grids
- Cyber-security and privacy of infrastructure systems

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue - Electrical Energy and Control Systems**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	August 13th, 2024
Publication Date	October 2024
