Special Issue on

Geological Disaster Response and Management

Call for Papers

Natural disaster occured due to geological disturbances often caused by shifts in tectonic plates and seismic activity. Seismology is the study of earthquakes and seismic waves which were caused by the sudden breaking of rock within the earth or an explosion. They are the energy that travels through the earth and is recorded on seismographs. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of **geological disaster response and management**.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **geological disaster response and management**. In this special issue, potential topics include, but are not limited to:

- Geological disasters and earthquakes
- Hydrological disasters
- Meteorological disasters
- Space disasters
- Natural disaster forecast and measures
- Geological hazard monitoring

Authors should read over the journal's <u>For Authors</u> carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's <u>Paper Submission System</u>.

Please kindly notice that the "Special Issue" under your manuscript title is supposed to be specified and the research field "Special Issue - Geological Disaster Response and Management" should be chosen during your submission.

According to the following timetable:

Submission Deadline	September 30th, 2021
Publication Date	November 2021
