

Special Issue on Geography

Call for Papers

Geography is the science that studies the lands, the features, the inhabitants, and the phenomena of the Earth. Four historical traditions in geographical research are the spatial analysis of the natural and the human phenomena, the area studies, the study of the man-land relationship, and the research in the earth sciences. Nonetheless, the modern geography is an all-encompassing discipline that foremost seeks to understand the Earth and all of its human and natural complexities—not merely where objects are, but how they have changed and come to be.

Geography has been called "the world discipline" and "the bridge between the human and the physical science". Geography as a discipline can be split broadly into two main subsidiary fields: the human geography and the physical geography. The former largely focuses on the built environment and how humans create, view, manage, and influence space. The latter examines the natural environment, and how organisms, climate, soil, water, and landforms produce and interact. The difference between these approaches led to a third field, the environmental geography, which combines the physical and the human geography, and looks at the interactions between the environment and humans.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Geography**.

Authors should read over the journal's [Author's Guidelines](#) carefully before submission, Prospective authors should submit an electronic copy of their complete manuscript through the journal [Paper Submission System](#).

According to the following timetable:

Manuscript Due	June 26th, 2013
Publication Date	August 2013

Please kindly notice that the "**Special Issue**" under your manuscript title is supposed to be specified and the research field "**Special Issue — Geography**" should be chosen during your submission.
