Special Issue on

Geoscientific Instrumentation, Methods and Data Systems

Call for Papers

Computational Geosciences covers mathematical modeling, simulation, numerical analysis, and other computational applications on geosciences. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of Geoscientific Instrumentation, Methods and Data Systems.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring Geoscientific Instrumentation, Methods and Data Systems. In this special issue, potential topics include, but are not limited to:

- Atmospheric and geospace sciences
- Design, and description of instrumentation and data systems;
- Calibration and data quality assessment
- Retrieval techniques of scientific products from measurements
- Climate change monitoring
- Natural disasters preventing
- Networking of instruments for enhancing high temporal and spatial resolution of observations
- Topographical data

Authors should read over the journal’s For Authors carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal’s Paper Submission System.

Please kindly notice that the “Special Issue” under your manuscript title is supposed to be specified and the research field “Special Issue - Geoscientific Instrumentation, Methods and Data Systems” should be chosen during your submission.

According to the following timetable:

<table>
<thead>
<tr>
<th>Submission Deadline</th>
<th>September 9th, 2021</th>
</tr>
</thead>
<tbody>
<tr>
<td>Publication Date</td>
<td>November 2021</td>
</tr>
</tbody>
</table>
