

Special Issue on Hydrology Research

Call for Papers

The theme of Hydrology Research involves the study and analysis of water in the environment, including its distribution, movement, and behavior within the Earth's various systems. It is a multidisciplinary field that encompasses aspects of geology, meteorology, climatology, chemistry, and biology. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of **Hydrology Research**.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Hydrology Research**. In this special issue, potential topics include, but are not limited to:

- Groundwater hydrology
- Hydrometeorology, hydrogeology and hydrogeophysics
- Distributed hydrological simulation technology
- Hydrology and water resources
- Hydrology and ecological environment
- Hydrology and sustainable development
- Hydrological modeling
- Water quality and pollution
- Flood and drought management
- Climate change and hydrological impacts
- Water management and policy

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue - Hydrology Research**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	January 10th, 2026
Publication Date	March 2026

Guest Editor:

Dr. Cunjin LU, China University of Mining and Technology, China.
