

## Special Issue on Polymeric Chemistry and Physics

### Call for Papers

Polymeric Chemistry and Physics is a branch of chemistry and physics that deals with the synthesis, characterization, and understanding of polymeric materials. Polymers are macromolecules composed of repeating units, often referred to as monomers, that are covalently bonded together. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in this area of **Polymeric Chemistry and Physics**.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **Polymeric Chemistry and Physics**. In this special issue, potential topics include, but are not limited to:

- Polymer Synthesis
- Polymer Characterization
- Polymer Chain Conformations
- Polymer Dynamics and Rheology
- Polymer Blends and Composites
- Polymer Interfaces and Surfaces
- Polymer Degradation and Stabilization
- Polymer Processing and Manufacturing
- Polymer Applications

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Polymeric Chemistry and Physics**” should be selected during your submission.

Special Issue timetable:

Submission Deadline	August 28th, 2024
Publication Date	October 2024
