

Special Issue on Mathematical Physical Model and Method

Call for Papers

Mathematical and physical models are considered by reference to some fundamental differences; the main advantages and disadvantages of each method are emphasized. Then, the possibilities are shown, which physical models offer today with the application of modern techniques, especially when they are used in combination with digital computers. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of mathematical physical model and method.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Mathematical Physical Model and Method**. In this special issue, potential topics include, but are not limited to:

- Fourier integral
- Residue theorem
- The analytic function and power series
- Application of mathematical physics method
- Mathematical physics model analysis
- Application of mathematical physics model

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue - Mathematical Physical Model and Method**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	December 29th, 2016
Publication Date	February 2017

Guest Editor:

Prof. Wen-Xiu Ma, University of South Florida, USA
