### **Special Issue on Equations of Mathematical Physics**

#### **Call for Papers**

Equations which describe mathematical models of physical phenomena. The equations of mathematical physics are part of the subject of mathematical physics. Numerous phenomena of physics and mechanics (hydro- and gas-dynamics, elasticity, electro-dynamics, optics, transport theory, plasma physics, quantum mechanics, gravitation theory, etc.) can be described by boundary value problems for differential equations. A very wide class of models is reducible to such boundary value problems. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in this area of **equations of mathematical physics**.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **equations of mathematical physics**. In this special issue, potential topics include, but are not limited to:

- Equation for vibrations of a string
- Equation for vibrations of a membrane
- Helmholtz equation
- Laplace's equation and poisson's equation
- Fourier analysis and Green's functions
- Equations of the parabolic type
- Applications of equations of Mathematical Physics

Authors should read over the journal's <u>For Authors</u> carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's <u>Paper Submission System</u>.

Please kindly specify the "**Special Issue**" under your manuscript title. The research field "**Special Issue** – *Equations of Mathematical Physics*" should be selected during your submission.

Special Issue timetable:

Submission Deadline	August 16th, 2024
Publication Date	October 2024
