

Special Issue on Biological Effects Research

Call for Papers

Biological Effects Research is a branch of biomedical engineering and it is the study of during medical diagnosis and treatment, a various factors may cause harm and other functions to the body. Biological effects mainly study optical, acoustic, electromagnetic radiation and the radiation energy transmission and distribution in the body, and their biological affects and mechanisms at the same time. As one of the most important research fields of human life, **biological effects research** is of great attractions to researchers.

In this special issue, we intend to invite front-line researchers and authors to submit original researches and review articles on exploring **biological effects research**. Potential topics include, but are not limited to:

- Medical diagnosis
- Biological effects
- Medical treatment
- Optical energy transmission in the body
- Radiation energy distribution in the body
- Acoustic energy transmission in the body
- Biological mechanisms

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission, Prospective authors should submit an electronic copy of their complete manuscript through the journal at [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue - Biological Effects Research**” should be chosen during your submission.

According to the following timetable:

Manuscript Due	May 14th, 2014
Publication Date	July 2014

Guest Editor:

Scientific Research
Open Access

**Journal of Biomedical
Science and Engineering**
ISSN Online: 1937-688X
