

Special Issue on Protein Research

Call for Papers

Proteins are large biomolecules, or macromolecules, consisting of one or more long chains of amino acid residues. Proteins perform a vast array of functions within organisms, including catalysing metabolic reactions, DNA replication, responding to stimuli, providing structure to cells, and organisms, and transporting molecules from one location to another.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on **Protein Research**. Potential topics include, but are not limited to:

- Protein and biomedical engineering
- Protein–protein interactions
- Protein therapeutics
- Biosynthesis
- Synergistic effect
- Gene and protein research
- Protein folding
- Mass spectrometry
- Bioinformatics analysis
- Proteomic analysis
- Protein adsorption
- protein expression and biomedical applications
- Amino acids analysis
- Protease inhibitor

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue – Protein Research**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	May 1st, 2020
Publication Date	July 2020

Scientific Research
Open Access

**Journal of Biomedical Science
and Engineering**
ISSN Online: 1937-688X
