TABLE OF CONTENTS

Volume 5 Number 4 April 2013

The Impact of Thermal Modeling on Limiting RF-EMF
N. Leitgeb..........................................................................................................................137

Effect of Battery on Moving Properties of Cableless In-Piping Magnetic Actuator
R. Watanabe, T. Izumikawa, H. Yaguchi.................................................................145

Minimum Attenuation of Physiologically-Patterned, 1 µTesla Magnetic Fields through Simulated Skull and Cerebral Space
M. A. Persinger, K. S. Saroka................................................................................151

An Entropy Approach to Tesla’s Discovery of Wireless Power Transmission
S. Abdelhady....................................................................................................................157

Simple Method to Change the Magnetic Resonant Frequencies of Short Wire Pairs
Y. Kokubo....................................................................................................................162

Effective Size Reduction Technique for Microstrip Filters
D. Kumar, A. De.............................................................................................................166

Negative Refraction in Chiral Plasma Media
H. Torres-Silva..............................................................................................................175

Double-Sided Microstrip Circular Antenna Array for WLAN/WiMAX Applications
R. Alsulami, H. Song..................................................................................................182

The figure on the front cover is from the article published in Journal of Electromagnetic Analysis and Applications, 2013, Vol. 5, No. 4, pp. 166-174 by Dhirendra Kumar and Asok De.

Journal of Electromagnetic Analysis and Applications (JEMAA) is a professional journal in the field of electromagnetic analysis, testing and application. The goal of this journal is to provide an international platform for engineers and academicians all over the world to promote, share, and discuss various new issues and developments in the field of electromagnetics. This journal is edited to encourage deeper understanding and greater effectiveness in theory analysis, testing, numerical calculation and engineering application that relevant electromagnetic fields.

Subject Coverage
JEMAA publishes four categories of original technical reports: papers, communications, reviews, and discussions. Papers are well-documented final reports of research projects. Communications are shorter and contain noteworthy items of technical interest or ideas required rapid publication. Reviews are synoptic papers on a subject of general interest, with ample literature references, and written for readers with widely varying background. Discussions on published reports, with author rebuttals, form the fourth category of JEMAA publications. Topics of interest include, but are not limited to:

- Antenna Arrays
- Antenna Theory and Applications
- Biological Effects
- Eddy Current Problems
- Electric Power and Grounding (Earth)
- Electric Power Line
- Electrical Machine
- Electrocardiograph (ECG)
- Electroencephalograph (EEG)
- Electromagnetic Breaker
- Electromagnetic Compatibility
- Electromagnetic Compatibility and Electromagnetic Environment
- Electromagnetic Compatibility (EMC)
- Electromagnetic Devices
- Electromagnetic Field Theory
- Electromagnetic Interferences (EMI)
- Electromagnetic Inverse Problems
- Electromagnetic Launch
- Electromagnetic Material Modelling
- Electromagnetic Measurement Technology and Instruments
- Electromagnetic Nondestructive Testing
- Electromagnetic Numerical Analysis
- Electromagnetic Physics
- Electromagnetic Solid Mechanics
- Electromagnetic Structure Optimization
- Electromagnetism and Biological Tissues
- Electromagnetism and Medical Devices
- Electromagnetism in Medical Applications
- Electromyography
- Environmental Pollution by Electromagnetics
- Fiber Optics
- High Frequency Techniques
- Integrated Optics
- Magnetic Fluid
- Measuring Technique of Radiated Electromagnetic
- Medical Applications
- Moving Conductor Eddy Current Problems
- Multiphysics Coupled Problems
- Noise and Signals
- Noise Reduction
- Optical and Millimeter Wave Techniques
- Printed Circuits
- Quasi-Static Fields
- Radar Measurements and Applications
- Radiated Electromagnetic
- Scattering and Diffraction
- Sarges (Thunderbolts or Static Electricity)
- Solid State Devices and Circuits
- Static Fields
- Static Magnetic
- Test Electromagnetic Analysis's Method (Team) Workshop Benchmark Problems
- The Problems of the Propagation of Electromagnetic Waves
- Wavesguides

Notes for Intending Authors
Submitted papers should not be previously published nor be currently under consideration for publication elsewhere. Paper submission will be handled electronically through the website. All papers will be peer reviewed. For more details about the submissions, please access the website.
