Special Issue on Spatial Modeling and Spatial Information

Call for Papers

Spatial information is the information reflecting the spatial distribution characteristics of geographical entities. Features of spatial distribution include the location, shape, spatial relationship between entities, regional spatial structure, etc. Spatial modeling is based on the operation of spatial map data, also known as "map modeling". It helps analysts and planners to complete the analysis process and gradually specify the data needed to complete the analysis process. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of **Spatial Modeling and Spatial Information.**

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Spatial Modeling and Spatial Information**. Potential topics include, but are not limited to:

- Spatial data analysis
- Geographic data and information
- Formation process of graph model
- The operation of spatial modeling
- Spatial modeling and reasoning
- Theories of political behavior
- Spatial modeling principles in earth sciences
- Spatial decision support system

Authors should read over the journal's For Authors carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's Paper Submission System.

Please kindly specify the "**Special Issue**" under your manuscript title. The research field "**Special Issue - *Spatial Modeling and Spatial Information***" should be selected during your submission.

Special Issue Timetable:

Submission Deadline	November 3rd, 2020
Publication Date	January 2021
