Editor-in-Chief
Prof. Christian Corda
Section of Physics of Santa Rita School of Advanced Academic Studies and Research, Italy

Editorial Board
Prof. Mohamed Assaad Abdel-Raouf
Physics Department, Faculty of Science, Ain Shams University, Egypt

Dr. Kazuharu Bamba
Fukushima University, Japan

Dr. Andrew Beckwith
Department of physics, PRC (visiting scholar) Chongqing University, USA

Prof. Elmo Benedetto
Department of Computer Science, University of Salerno, Italy

Dr. Alexander Burinskii
Laboratory of Theoretical Physics in Nuclear Safety Institute of the Russian Academy of Sciences, Russia

Prof. Farhad Darabi
Azarbaijan Shahid Madani University, Iran

Dr. Luca Fabbri
University of Bologna, Italy

Dr. Maria Emília Xavier Guimarães
Instituto de Física, Universidade Federal Fluminense, Brazil

Dr. Seyed Hossein Hendi
Shiraz University, Iran

Dr. Huda E. Khalid
Mosul University, Iraq

Prof. Maria Paola Lombardo
Istituto Nazionale di Fisica Nucleare, Italy

Dr. Lino Miramonti
Università degli Studi di Milano, Italy

Dr. Hooman Moradpour
Research Institute for Astronomy and Astrophysics of Maragha (RIAAAM), Iran

Prof. Jean Perron
Department of Applied Sciences (DSA) University of Québec in Chicoutimi, Canada

Prof. Christopher Pilot
Gonzaga University, Spokane, WA, USA

Prof. Waldyr A. Rodrigues Jr.
Institute of Mathematics, Statistics and Scientific Computation State University of Campinas (UNICAMP), Brazil

Prof. Matteo Luca Ruggiero
DISAT, Polytechnic University of Turin, Italy

Dr. Burra Gautam Sidharth
International Institute of Applicable Mathematics & Information Sciences B.M. Birla Science Centre, India

Dr. Anirvan Sircar
Intel Corporation, USA

Dr. Lorenzo Zaninetti
Department of Physics, Italy
Table of Contents

Volume 7   Number 4                                   October  2021

Amalgamated Geometric Structure of the Local Multiverse
I. Y. Potemine........................................................................................................................................1213

Study of the Isotope Effects of Novel Superconducting LaH$_{10}$-LaD$_{10}$ and H$_3$D$_3$S Systems
H. H. Mohammed...................................................................................................................................1219

Three Dimensional Space-Time Gravitational Metric, 3 Space + 3 Time Dimensions
E. G. Haug................................................................................................................................................1230

Looking at the Physics of What a Quark Star-Black Hole Binary Would Create in Terms of GW Signals and New Physics
A. Beckwith............................................................................................................................................1255

Penrose Suggestion as to Pre Planck Era-Black Holes Showing Up in Present Universe Data Sets Discussed, with a Possible Candidate as to GW Radiation Which May Provide Initial CMBR Data
A. W. Beckwith.......................................................................................................................................1264

Solving the Solar Neutrino Problem
A. Irani......................................................................................................................................................1278

Birkhoff’s Theorem and Lie Symmetry Analysis
A. Mukherjee, S. B. Roy...........................................................................................................................1280

Dark Matter Interacts with Electromagnetic Waves
K. Suto.......................................................................................................................................................1298

Multiverse Model: External Universe(s) as Source of Dark Energy
W. Krause...................................................................................................................................................1306

How Kieffer Density Matrix Formalism Aids Different Initial Time Steps, Leading to Lorentz Violations, and Breakup of Primordial Black Holes for GW Generation
A. Beckwith...............................................................................................................................................1315

A Simple Factor in Canonical Quantization Yields Affine Quantization Even for Quantum Gravity
J. R. Klauder...............................................................................................................................................1328

Dark Energy Is a Phenomenal Effect of the Expanding Universe-Possibility for Experimental Verification
S. P. Kodukula...........................................................................................................................................1333
Solar System. Angular Momentum. Dark Matter Reactors
V. S. Netchitailo
.................................................................1353

The Origin of Cosmic Structures Part 1—Stars to Superclusters
J. C. Botke
.................................................................1373

The Origin of Cosmic Structures Part 2—HI Rings
J. C. Botke
.................................................................1410

On Clausius’, Post-Clausius’, and Negentropic Thermodynamics
J. C. Íñiguez
.................................................................1425

A New Theory for the Essence and Origin of Electron Spin
N. Butto
.................................................................1459

Signal Travel Time Anomaly between Earth and Solar Planets
F. Ramdani
.................................................................1472

First Principal Treatment of Size of Inflaton Potential, Inflaton Mass, Scale Factors,
and Frequency of Emitted Radiation, Using Linde and Padmanabhan Models
of Early Cosmology and BEC
A. Beckwith
.................................................................1477

Ball Lightning as Source of High-Energy Particles When It Enters a Dense Medium
A. Oreshko, A. Oreshko
.................................................................1484

From the Beginning of the World to the Beginning of Life on Earth
V. S. Netchitailo
.................................................................1503

Proposal of a New Scalar Gauge in Relativity Field Equation
Y. H. Yun, K. Jang
.................................................................1524
Call for Papers

Journal of High Energy Physics, Gravitation and Cosmology (JHEPGC) is a cutting edge research periodical aimed to be forward looking and innovative and, at the same time, remaining in the mainstream. In other words, we are all in favor of being open minded about alternatives to mainstream, but they must be properly formulated and plausible scientific proposals, supported by mathematical rigor. In fact, being open mind in Science is a good thing and we encourage mainstream as well as avant-garde research papers but they must be grounded in real science and of course meet with our refereeing standards.

The need for such a journal has become more than apparent when recent cosmological observation and measurement has made it clear that new discoveries (particularly the discovery of Dark Energy), the accelerated cosmic expansion and gravitational waves have shaken the very foundation of High Energy Physics, Gravitation and Cosmology. Thus we, on the one hand, need to be truly open minded, i.e. in the sense clarified above. On the other hand, we have to adhere as much as possible to our time tested theories and be guided even more than before by observations and experiments.

The Journal is intended to fulfill this double edge philosophy religiously. It goes without saying that the refereeing of submitted papers will be also both rigorous and swift. Following what we have said, the Journal will predictably cover, but will not be restricted only to, the following subjects:

Subject Coverage

- Accelerated Cosmic Expansion
- Advances in Mathematical Methods
- Astronomy and Astrophysics
- Black Holes
- Cosmic Quantum Entanglement
- Cosmic-Ray Physics
- Dark Energy
- Dark Matter
- Dimensional Regularization
- Extended Theories of Gravity
- Fractal Models of Space Time
- Gravitational Waves
- K-Theory
- Loop Quantum Gravity
- M-Theory
- N-Category Theory Applied to Physics and Cosmology
- Non-Commutative Geometry
- Non-Demolition Quantum Measurement
- Observational Techniques
- Phenomenological Oriented Theories of Particles and Field String Theories
- Quantum Field Theories in Curved Space Time
- Quantum Teleportation
- Renormalization
- Scale Relativity
- Theoretical and Experimental High Energy Physics
- Topological Defects
- Unification of Fundamental Interactions
- Varying Speed of Light
