Journal of Power and Energy Engineering (JPEE) is an international journal dedicated to the latest advancement of power and energy engineering. The goal of this journal is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in different areas of power and energy engineering.

Subject Coverage

All manuscripts must be prepared in English, and are subject to a rigorous and fair peer-review process. Accepted papers will immediately appear online followed by printed hard copy. The journal publishes original papers including but not limited to the following fields:

- **1. Power Generation—Conventional and Renewable**
  - Bio-energy technologies, process and utilization
  - Environmental-friendly technologies for power generation
  - Geothermal and tidal wave energy
  - Hydropower technologies and applications
  - New technologies and design for energy efficiency
  - New technologies for minimizing CO_2 generation
  - Photovoltaic for solar power applications
  - Safe nuclear energy generation and utilization
  - Thermal power technologies and applications
  - Waste products as fuel
  - Wind power generation and utilization
  - Other sustainable energy
- **2. Power System Management**
  - Application of wide area measurement system (WAMS)
  - Control strategies for modern power system stability
  - Integrated substation automation technologies
  - Load modeling, estimation and forecast
  - Modeling and simulation of large power systems
  - Online monitoring and fault diagnosis system
  - Power system analysis and optimization
  - Power system management technologies
  - Power system monitoring and mitigation technologies
  - Power system planning and operation
- **3. Power Transmission and Distribution**
  - Advanced distribution and SCADA technologies
  - Electromagnetic analysis in power systems
  - Electromagnetic compatibility in power systems
  - Electromagnetic transient in high voltage power systems
  - HVDC and flexible AC transmission system (FACTS)
  - Insulation condition monitoring in power systems
  - Over-voltage, lightning protection and grounding
  - Plasma physics and the pulsed power technology
  - Ultra High Voltage (UHV) technologies
- **4. Smart Grid Technologies**
  - Agent-based Computational Economics for Grid
  - Agent-based mechanisms for Grid markets
  - Agent-based simulation of Grid environments and markets
  - Automated negotiation for Grid resource allocation
  - Engineering of Grid markets and Grid architectures
  - Modeling of Grid environments
  - Resource allocation in Grid scenarios using agent-based approaches
  - Technical research on future application domains

We are also interested in: 1) Short Reports—2-5 page papers where an author can either present an idea with theoretical background but has not yet completed the research needed for a complete paper or preliminary data; 2) Book Reviews—Comments and critiques

Notes for Intending Authors

The submitted manuscript should not have been previously published in any form and must not be currently under consideration for publication elsewhere. Paper submission will be handled electronically through the website. All paper are refereed through a peer process. For more details about the submissions, please access the website.
