

Special Issue on Mobile Application

Call for Papers

Mobile Application, also called mobile apps, it is a term used to describe Internet applications that run on smart phones and other mobile devices. Mobile applications usually help users by connecting them to Internet services more commonly accessed on desktop or notebook computers, or help them by making it easier to use the Internet on their portable devices. The goal of this special issue is to explore the challenges, issues and opportunities associated with the use of free and open source software in mobile platforms and apps. As mobile phones and devices become more powerful, as cloud services and telecom infrastructure become richer, and as consumer expectations evolve, developers are faced with an array of challenges that affect how they should systematically build and deploy new applications and systems.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **mobile application**. Potential topics include, but are not limited to:

- Mobile apps and mobile download platforms
- Mobile application development
- Mobile application management
- Mobile applications for business
- Smart phone operating system
- Exposing mobile malware from the inside
- Mobile station application execution environment

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue - Mobile Application**” should be chosen during your submission.

According to the following timetable:

Manuscript Due	August 14th, 2014
Publication Date	October 2014

Guest Editor:

Prof. **Yashwant K. Malaiya**
