

Special Issue on Water Treatment Technology

Call for Papers

Water treatment technology includes seawater desalination technology, domestic sewage, industrial waste water recycling technology, drinking water depth treatment technology and so on. Water treatment refers to the physical and chemical measures taken to make water quality to a certain standard of use. The purpose is to remove existing contaminants in the water, or reduce the concentration of such contaminants so the water becomes fit for its desired end-use. One such use is returning water that has been used back into the natural environment without adverse ecological impact. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of water treatment technology.

In this special issue, we intend to invite front-line researchers and authors to submit original researches and review articles on exploring **water treatment technology**. Potential topics include, but are not limited to:

- Drinking water purification system
- Wastewater treatment
- Industrial and agricultural water treatment
- Sewage treatment
- Seawater desalination technology
- Reverse osmosis water treatment technology
- Nanofiltration membrane technology
- Water recycling system

Authors should read over the journal's <u>For Authors</u> carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's <u>Paper Submission System</u>.

Please kindly notice that the "**Special Issue**" under your manuscript title is supposed to be specified and the research field "**Special Issue** – *Water Treatment Technology*" should be chosen during your submission.

According to the following timetable:

Submission Deadline	June 27th, 2018
Publication Date	August 2018
