

Special Issue on Water Engineering Projects and Management

Call for Papers

Water management refers to the management of planning, development, distribution and effective use of water sources under hydrological policies and laws. Water Engineering Projects mainly use the principles of fluid mechanics to solve water-related problems (e.g. collection, transportation, measurement). In order to better study and evaluate water engineering projects, academic researchers have begun to use physical model. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of **Water Engineering Projects and Management**.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Water Engineering Projects and Management**. Potential topics include, but are not limited to:

- Water resources and hydropower engineering
- Wastewater engineering: treatment, disposal, and reuse
- Water project methods of purification
- Water supply project
- Water transportation
- Hydrological disasters
- Water quality engineering: physical/chemical treatment processes

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Water Engineering Projects and Management**” should be selected during your submission.

Special Issue Timetable:

Submission Deadline	June 30th, 2020
Publication Date	August 2020

Guest Editor:

Scientific Research
Open Access

**Journal of Water Resource
and Protection**
ISSN Online: 1945-3108
