

Special Issue on Climate Change and Water Resources

Call for Papers

Water resources are widely used by human beings in production and living activities. Climate change has a significant impact on water resources. The impact of climate change on water resources is mainly composed of two parts: one is the study of the impact of climate change on the hydrological cycle, and the other is the impact on the water resources management system and the balance of supply and demand. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of **Climate Change and Water Resources**.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Climate Change and Water Resources**. Potential topics include, but are not limited to:

- Global climate change and precipitation
- Water disasters
- Impacts of climate change on water resources
- Hydrological cycle
- Climate, water, and agriculture
- Changes in the balance between snow and rain
- Climate change and water policy
- Water resources management under climate change
- Water resources supply and demand balance

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Climate Change and Water Resources**” should be selected during your submission.

Special Issue Timetable:

Submission Deadline	October 15th, 2020
Publication Date	December 2020
