

Special Issue on Water Quality Monitoring, Assessment and Management

Call for Papers

In order to evaluate the water quality, a series of water quality parameters and water quality standards are stipulated, such as drinking water, industrial water and fishery water quality standards. By monitoring and measuring the types, concentrations and changing trends of pollutants in the water, we can better assess water quality and protect the environment. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of **Water Quality Monitoring, Assessment and Management**.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Water Quality Monitoring, Assessment and Management**. Potential topics include, but are not limited to:

- Surface and groundwater monitoring
- Physical and chemical analyses
- Water quality standards
- Water quality modelling and prediction
- Water quality parameter
- Hydrological measurements
- Biological monitoring
- Sustainable water-quality management
- Remote sensing monitoring technology

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Water Quality Monitoring, Assessment and Management**” should be selected during your submission.

Special Issue Timetable:

Submission Deadline	December 23rd, 2020
Publication Date	February 2021

Guest Editor:

Scientific Research
Open Access

**Journal of Water Resource
and Protection**
ISSN Online: 1945-3108
