

## Special Issue on Hydrological Forecasting, Models and Cycles

### Call for Papers

Hydrological forecasting refers to the prediction of future hydrological conditions in a certain area based on previous or current hydrometeorological data. It is of great significance for flood control, drought resistance, and rational use of water resources. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of **Hydrological Forecasting, Models and Cycles**.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Hydrological Forecasting, Models and Cycles**. Potential topics include, but are not limited to:

- Hydrological cycle and processes
- Hydrological extremes and their impact
- Hydrological disasters
- Flood forecasting & warning
- Earth and atmospheric processes
- Hydrological modelling
- Water resource systems and management
- Applied hydrology
- Measurement, mathematical representation and computational aspects of hydrological processes

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Hydrological Forecasting, Models and Cycles**” should be selected during your submission.

Special Issue Timetable:

Submission Deadline	February 9th, 2021
Publication Date	April 2021

**Guest Editor:**

**Scientific Research**  
*Open Access*

**Journal of Water Resource  
and Protection**  
ISSN Online: 1945-3108
