

Special Issue on Groundwater Management and Protection

Call for Papers

Groundwater refers to the water that exists in the rock gaps below the ground. Groundwater is an important part of water resources. Due to the stable water volume and good water quality, it is one of the important water sources for agricultural irrigation, industrial mining and water consumption in the cities. However, under certain conditions, changes in groundwater can also cause unfavourable natural phenomena such as swamping, salinization, landslides, and land subsidence. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of **Groundwater Management and Protection**.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Groundwater Management and Protection**. Potential topics include, but are not limited to:

- Groundwater pollution, treatment and remediation
- Groundwater utilization
- Groundwater quality monitoring and protection
- Groundwater simulation models
- Groundwater and environmental change
- Groundwater ecology and biodiversity
- Water pollution and human health
- Water policy and hydroeconomics
- Groundwater purification
- Interaction between groundwater and surface water

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Groundwater Management and Protection**” should be selected during your submission.

Special Issue Timetable:

Submission Deadline	October 31st, 2020
Publication Date	December 2020

Guest Editor:

Scientific Research
Open Access

Journal of
Water Resource and Protection
ISSN Online: 1945-3108
