TABLE OF CONTENTS

Volume 2 Number 2

April 2013

Study of Photocatalytic Degradation of Methyl Orange on Different Morphologies of ZnO Catalysts

C.-W. Tang.....19

Liquid Phase Hydrogenation of *p*-Chloronitrobenzene on Au-Pd/TiO₂ Catalysts: Effects of Reduction Methods

Y.-W. Chen, D.-S. Lee.....25

Kinetics of the Oxidation of Benzhydrols with Permanganate under Phase Transfer Catalysis in Organic Solvents

K. M. Basheer, J. Joseph, T. D. R. Nair.....35

Catalytic Synthesis of Salicylate Esters over Cordierite Honeycomb Coated with Mo (VI)/ZrO₂

M. Shyamsundar, S. Z. M. Shamshuddin, N. M. Mubarak, S. R. Prathap.....39

Montmorillonite K10 Clay Catalyzed One Pot Synthesis of 2,4,6-Tri Substituted Pyridine under Solvent Free Condition

V. Kannan, K. Sreekumar.....42

Cationic Metalloporphyrins Immobilized in Faujasite Zeolites as a Cytochrome P-450 Mimic

L. P. B. Lôvo, F. C. Skrobot, G. C. Azzellini, Y. Yamamoto, I. L. V. Rosa.....47

The figure on the front cover is from the article published in Modern Research in Catalysis, 2013, Vol. 2, No. 2, pp. 25-34 by Yu-Wen Chen and Der-Shing Lee.

Modern Research in Catalysis (MRC) is an open access journal published quarterly. The goal of this journal is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in all aspects of Catalyst.

Subject Coverage

All manuscripts must be prepared in English, and are subject to a rigorous peer-review process. Accepted papers will immediately appear online followed by printed in hard copy. The areas covered by Modern Research in Catalysis (MRC) include but are not limited to the following fields:

- Applications of catalysts
- Catalysis by nano-materials
- Catalytic function to fundamental chemical processes at surfaces and in metal complexes
- Catalytic reactions
- Computational catalysis
- Electrocatalysis
- Enzymatic catalysis and spectroscopic methods for structural characterization
- Homogeneous catalysis
- Heterogeneous catalysis
- Novel concepts in surface chemistry
- Organocatalysis
- Significant of catalysis
- Supported organometallic catalysis
- Surface chemistry
- Synthesis and catalytic function of novel inorganic solids and complexes
- Theoretical methods of the catalytic processes

We are also interested in: 1) Short reports—2-5 page papers where an author can either present an idea with theoretical background but has not yet completed the research needed for a complete paper or preliminary data; 2) Book reviews—Comments and critiques.

Notes for Intending Authors

Submitted papers should not have been previously published nor be currently under consideration for publication elsewhere. Paper submission will be handled electronically through the website. All papers are refereed through a peer review process. For more details about the submissions, please access the website.

What is SCIRP?

Scientific Research Publishing (SCIRP) is one of the largest Open Access journal publishers. It is currently publishing more than 200 open access, online, peer-reviewed journals covering a wide range of academic disciplines. SCIRP serves the worldwide academic communities and contributes to the progress and application of science, by delivering superior scientific publications and scientific information solution provider that enable advancement in scientific research.

What is Open Access?

All original research papers published by SCIRP are made freely and permanently accessible online immediately upon publication. To be able to provide open access journals, SCIRP defrays operation costs from authors and subscription charges only for its printed version. Open access publishing allows an immediate, world-wide, barrier-free, open access to the full text of research papers, which is in the best interests of the scientific community.

- High visibility for maximum global exposure with open access publishing model
- Rigorous peer review of research papers
- Prompt faster publication with less cost
- Guaranteed targeted, multidisciplinary audience
