Special Issue on Nanostructured Materials

Call for Papers

Nanoscience and nanotechnology are transforming materials science in a broad way, in a manner similar to polymer chemistry’s transformation of materials science over the preceding century. The continuous development of novel nanostructured materials and the extensive study of physicochemical phenomena at the nanoscale are creating new approaches to innovative technologies that are constantly resulting in products with a wide range of applications. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of Nanostructured Materials.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore Nanostructured Materials. In this special issue, potential topics include, but are not limited to:

- Carbon-based nanomaterials
- Inorganic-based nanomaterials
- Organic-based nanomaterials
- Composite-based nanomaterials
- Nanoparticles in biomedical and healthcare products
- Nanobacteria and nanobes
- Challenges and risk assessment of nanomaterials
- Nanomaterial toxicity

Authors should read over the journal’s For Authors carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal’s Paper Submission System.

Please kindly specify the “Special Issue” under your manuscript title. The research field “Special Issue – Nanostructured Materials” should be selected during your submission.

Special Issue timetable:

<table>
<thead>
<tr>
<th>Submission Deadline</th>
<th>December 29th, 2020</th>
</tr>
</thead>
<tbody>
<tr>
<td>Publication Date</td>
<td>February 2021</td>
</tr>
</tbody>
</table>
